■ **Seamless Continuous Lines :**

Create uninterrupted lines by linking profiles with a simple middle connections.

Aluminium End Cap

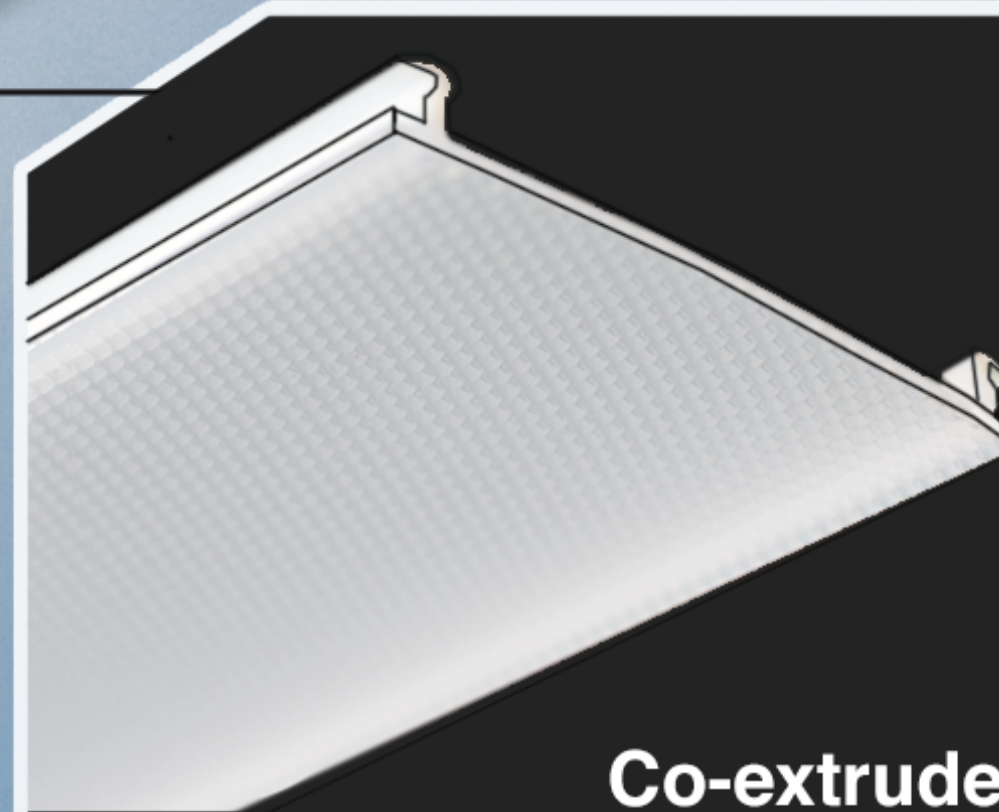

Enhanced Protection for Humid & Dust-Prone Environments

- While our standard version provides an excellent solution for indoor environments, our advanced design allows customers to prepare the luminaire for more demanding conditions.

By adding our specialized aluminum end caps and a diffuser with a silicone gasket, protection ratings of up to IP65 are easily achievable—perfect for spaces with higher environmental requirements.

Co-extruded Diffuser with silicon gasket

Dary - Dark & Light Reflector

■ Low Glare Design:

Deep-set reflectors with controlled beam angles significantly reduce UGR, ensuring enhanced visual comfort in offices, retail, and hospitality spaces.

■ Higher Efficiency:

Optimized reflector geometry delivers focused light with minimal loss—providing better lumen output with less power consumed.

■ Architectural Aesthetics:

The “dark-off and bright-on” effect keeps ceilings clean and discreet when off, while offering sharp visual contrast and brilliance when the luminaire is lit.

Mareli's Own Dark and Light Reflector- Dary
